PROTECTING YOU.

# WE ARE ONLY SATISFIED WITH THE VERY BEST.

## AIRXBLOCKER®

The insulation system in the shoulder area guarantees more safety through a permanent air cushion that rises from protectors in the inner lining and also stays upright when carrying respiratory protective equipment. The trapped air isolates this exposed area.

## HPX SYSTEM®

With the HPX System®, changing a defective zip is no longer expensive and complicated, but simple and affordable. Through the High Performance eXchange System, or HPX System, the lifespan of protective clothing is increased significantly. In addition, thanks to the striking design it is immediately visible whether or not the front part is fully closed. That makes it even safer.

EU Patent 07121066.0

## TEXTOP TRIPLE FABRIC®

The TEXTOP Triple Fabric® is a textile reflective stripe that is made from fabric and therefore is extremely breathable and more durable. The reflective, silver-stripe material composition, patented by 3M\*, adheres very well to the structure of the soft fabric. In addition, the TEXTOP Triple Fabric® is abraded less severely through wear and washing.

EU Patent 08102991.0  
\*3M EU Patent 1974621

## ERGOXPAD®

The TEXTOP Ergopad® is a cushioned, ergonomically preformed knee pad that fits the knee in every place and avoids creating pressure marks. It is flame-resistant and does not become saturated with water, in contrast to the aramid non-woven padding, so that the trousers dry much more quickly after washing.

## WICKINGX BARRIER®

The wicking barrier is permanently waterproof, breathable and wash-resistant. That means even after many uses and washes, the clothing's lining remains completely dry thanks to the GORE-TEX barrier, as no more moisture can enter through the seams.

- › Stand-up collar (width adjustable, with hanger)
- › Collar width adjustment (at the back, freedom of movement)

- › Drag rescue device (rescue strap integrated)
- › Radio pocket (length and width adjustable)
- › Rank tab (grade identification)

- › Flashlight loop (triple lock, length and width adjustable)
- › Loop system (for TEXTOP IRS belt system)
- › Grab tab (textile, signal colour)

- › Cuff (width adjustable, with thermo wristlet)

- › Inspection openings (internal)

- › Adjustable waist (individually adjustable)
- › Pockets (inserted pocket and reach-through)

- › Cargo pockets (external, reinforced flap)
- › Drag rescue device (rescue strap, both sides)

- › Knee reinforcement (abrasion protection)

- › Cuff outside (abrasion protection, inner leg and hem)
- › Cuff inside (dirt protection)
- › Cuff backside (heel cut-out)

FIRE PHOENIX
BELT SYSTEM

One belt, many functions

The innovative TEXTPORT belt system series can be implemented as an optional integrated rescue system (IRS) for all FIRE PHOENIX jackets with the standardized 'Bear' functions. The varied belt systems stand out through heat protection, comfort and simple handling. Thanks to the extensive range of accessories, there is also the possibility to put together systems individually and in doing so to meet the most varied requirements of a fire department. Another advantage is that the harness / rescue strap can very easily be threaded in and out through the well-thoughtout design. Therefore, standard inspection, maintenance and correct cleaning of the jacket are made easier.

THE INNOVATIVE
MATERIAL COMPOSITION
FOR EXTREME PROTECTION
AND COMFORT.

When fighting fires, two serious dangers are direct flames and heat radiation. If the heat penetrates the material of the protective clothing, it can lead to burns to the body. The thermal insulation can delay this decisively – by just those few seconds that are required. Therefore, TEXTPORT has developed the material composition X-TREME®. X-TREME® offers notably more protection and comfort (thanks to its innovative material composition and new high-tech intermediate layer) than is required by the European EN 469 norm. The heat radiation is blocked for a long period of time.

Material composition

X-TREME® is made up of four layers:
outer layer, intermediate layer (TNX. Heat Comfort Barrier), membrane (GORE-TEX Fireblocker N and GORE-TEX moisture barrier with GORE® CROSSTECH® product technologies) and lining (Nomex®/viscose)

THE INNOVATIVE
MATERIAL COMPOSITION
FOR MORE PROTECTION
AND COMFORT –
LIGHT VERSION.

X-TREME® light offers heat protection that significantly exceeds the values set out in the European norm EN 469, whether in direct contact with flames or heat radiation. When developing X-TREME light, the focus has been strongly on the weight. X-TREME® light combines excellent protection with significantly improved comfort, supported by the material's light weight.

Material composition

X-TREME® light is made up of three layers:
outer layer, intermediate layer (Heat Comfort Barrier) and membrane / flameliner (GORE-TEX Flameliner® G and GORE-TEX moisture barrier with GORE® CROSSTECH® product technology)

FIRE PHOENIX

Table with 5 columns: Item description, Outer layer, Composition code, Composition: outer layer / HCB / membrane / lining, and Colour variants. It lists two configurations for the FIRE PHOENIX Jacket and Trousers, one using PBI NEO and the other Nomex NXT.

\* GORE-TEX Moisture Barrier with GORE® CROSSTECH® Product Technology

\* GORE-TEX Moisture Barrier with GORE® CROSSTECH® Product Technology

The FIRE PHOENIX by TEXTPORT combines the highest level of protection, a fresh design and top functionality in one suit. Inspired by a heroic look, it stands out with a unique optic for protective clothing, optimal visibility in use and the highest level of wearing comfort, thanks to a special cut and form. The FIRE PHOENIX, with its Drag and Loop system, can also be used optionally as an integrated rescue system (IRS) with our innovative belt system series.
