- › Hem outside (abrasion protection, inner leg and hem)
- › Hem backside (heel cut-out)
- › Hem inside (dirt protection)

FIG. FIRE STRETCH UK FR A Y415, 010

WE ARE ONLY
SATISFIED WITH THE VERY BEST

The insulation system in the shoulder area guarantees more safety through a permanent air cushion that rises from protectors in the inner lining and also stays upright when carrying respiratory protective equipment. The trapped air isolates this exposed area.

With the HPX System®, changing a defective zip is no longer expensive and complicated, but simple and affordable. Through the High Performance eXchange System, or HPX System, the lifespan of protective clothing is increased significantly. In addition, thanks to the striking design it is immediately visible whether or not the front part is fully closed. That makes it even safer.

EU-Patent 07121066.0

The TEXTPORT Triple Fabric® is a textile reflective stripe that is made from fabric and therefore is extremely breathable and more durable. The reflective, silver-stripe material composition, patented by 3M*, adheres very well to the structure of the soft fabric. In addition, the TEXTPORT Triple Fabric® is abraded less severely through wear and washing.

EU-Patent 08102991.0
*3M EU-Patent 1974621

The wicking barrier is permanently waterproof, breathable and wash-resistant. That means even after many uses and washes, the clothing's lining remains completely dry thanks to the GORE-TEX® barrier, as no more moisture can enter through the seams.

The TEXTPORT Ergopad® is a cushioned, ergonomically preformed knee pad that fits the knee in every place and avoids creating pressure marks. It is flame-resistant and does not become saturated with water, in contrast to the aramid non-woven padding, so that the trousers dry much more quickly after washing.

THE INNOVATIVE MATERIAL COMPOSITION
FOR MORE PROTECTION AND COMFORT – LIGHT VERSION.

X-TREME® light is made up of three layers:
outer layer, intermediate layer (Heat Comfort Barrier) and membrane / flameliner (GORE-TEX
Flameliner® G and GORE-TEX moisture barrier with GORE® CROSSTECH® product technology)

----- outer layer
----- intermediate layer
----- membrane /
flameliner

100% waterproof

FIRE STRETCH UK

The FIRE STRETCH UK is a highly flexible protective garment designed specifically for British emergency services. The garment features PBI® NEO® Y55 outer fabric, specially designed stretch areas, and many others special TEXTPORT features. Additional fluorescent reflective stripes at the jacket and trousers ensure excellent visibility, even in complete darkness. The FIRE STRETCH UK is available in FIT A and Fit B.
